Question 1: Explain the concept of opportunity cost and give an example.

Answer:

Opportunity cost refers to the value of the next best alternative that is forgone when a choice is made. It is a fundamental concept in economics because it highlights the trade-offs involved in every decision. Recognizing opportunity costs helps individuals and societies make efficient choices to maximize benefits.

Question 2: Describe the main features of a mixed economy.

Answer:

A mixed economy combines elements of both market and command economies. Key features include:

- Government Intervention: The government regulates certain sectors to correct market failures and promote social welfare.
- Private Ownership: Most resources and businesses are privately owned.
- Public and Private Sectors: Both sectors operate simultaneously, with the government providing essential services like healthcare and education.
- Market Mechanism with Regulation: Prices are generally determined by supply and demand, but the government intervenes through policies, taxes, and subsidies to guide economic activities.

This system aims to balance efficiency with social equity, ensuring resources are allocated effectively while safeguarding public interests.

Question 3: What are the main types of economic resources? Provide examples for each.

Answer:

The main types of economic resources, or factors of production, include:

Answer:

| Aspect | Market Economy | Command Economy |
