Sample Practice Problems and Solutions

Problem 1: Finding an Inscribed Angle

Given a circle with center O and points A, B, C on the circle, where $\angle ABC$ is inscribed and subtends arc AC . If the measure of arc AC is 80° , what is the measure of $\angle ABC$?

Solution

According to the inscribed angle theorem, the measure of an inscribed angle is half the measure of its intercepted arc:

- $\angle ABC = \frac{1}{2} \times \text{measure of arc } AC$
- $\angle ABC = \frac{1}{2} \times 80^\circ = 40^\circ$

Problem 2: Calculating the Length of an Arc

In a circle with radius 10 units, the central angle measuring 60° , what is the length of the corresponding arc?

Solution

Using the formula for arc length $(L = r \theta)$, where (θ) is in radians:

- Convert $(\theta = 60^\circ)$ to radians: $(\theta = \frac{\pi}{3})$ radians.
- Calculate: $(L = 10 \times \frac{\pi}{3} = \frac{10\pi}{3})$ units.

Problem 3: Tangent Segment Length

A circle has a radius of 7 units. A point outside the circle is 25 units from the center. Find the length of the tangent segment from this point to the circle.

Solution

- Use the right triangle formed by the radius, the tangent segment, and the line from the external point to the circle's center.
- Apply the Pythagorean theorem: $(\text{tangent length}^2 = \text{external point distance}^2 - \text{radius}^2)$
- Calculate: $(t^2 = 25^2 - 7^2 = 625 - 49 = 576)$
- Thus, $(t = \sqrt{576} = 24)$ units.
