Sample Solved Question and Detailed Step-by-Step Solution

To illustrate these principles, let's explore a typical IMT Quantitative Techniques problem.

Question:

A manufacturing company wants to analyze the daily production output. The data for the past 10 days is as follows: 120, 135, 150, 145, 160, 155, 140, 130, 165, 150. Calculate the mean, median, and mode of the production output. Also, interpret what these measures tell about the data.

Solution: Step-by-Step Explanation

Step 1: Organize Data

Day	Production Output
-----	-------------------

--	--

1	120
---	-----

2	135
---	-----

3	150
---	-----

4	145
---	-----

5	160
---	-----

6	155
---	-----

7	140
---	-----

| 8 | 130 |

| 9 | 165 |

| 10 | 150 |

Step 2: Calculate the Mean

- Formula: $\text{Mean} = \frac{\sum x_i}{n}$
- Sum of data: $120 + 135 + 150 + 145 + 160 + 155 + 140 + 130 + 165 + 150 = 1500$
- Number of observations: $n = 10$

[

$$\text{Mean} = \frac{1500}{10} = 150$$

]

Step 3: Find the Median

- Arrange data in ascending order:

120, 130, 135, 140, 145, 150, 150, 155, 160, 165

- Since $n = 10$ (even), median is the average of 5th and 6th values:

[

$$\text{Median} = \frac{145 + 150}{2} = \frac{295}{2} = 147.5$$

]

Step 4: Determine the Mode

- Frequencies:
- 150 appears twice
- Other values appear once

- Mode: 150 (most frequently occurring value)

Step 5: Interpretation of Results

- Mean (150): The average daily production over the 10 days is 150 units, indicating the typical output level.
- Median (147.5): Half the days had production below 147.5 units, and half above, suggesting a symmetric distribution around this value.
- Mode (150): The most common production figure, indicating a prevalent output level, possibly a production target or standard.

Conclusion:

The measures of central tendency suggest that the company's daily output is generally centered around 150 units, with a slight skew towards higher values due to the presence of higher production days.

Advanced Techniques and Application-Based Solutions

Beyond basic descriptive statistics, IMT assignments often involve advanced techniques such as probability calculations, regression analysis, and optimization models.

Example: Probability Calculation

Suppose the assignment asks to determine the probability that production exceeds 160 units based on historical data.

Approach:

- Count days with production > 160: only day 9 (165 units)
- Total days: 10
- Probability:

\[

$$P(\text{production} > 160) = \frac{1}{10} = 0.1$$

\]

Interpretation: There is a 10% chance on any given day that production exceeds 160 units, based on historical data.

Example: Regression Analysis

In a scenario where you have data on advertising expenditure and sales, you may be required to develop a regression model.

Basic steps:

- Plot data points to visualize relationships.
- Calculate the regression line parameters (slope and intercept).
- Use the regression equation to predict sales based on advertising spend.
- Analyze the strength and significance of the model.

Common Mistakes to Avoid in IMT Quantitative Techniques Assignments

To excel, students should be cautious of typical pitfalls:

- Misinterpreting data or question requirements
- Forgetting to check assumptions (e.g., normality)
- Skipping steps or presenting calculations without explanation
- Using incorrect formulas
- Rounding off prematurely or excessively
- Ignoring units or context in interpretation

Conclusion and Tips for Success

Mastering IMT Quantitative Techniques assignments requires a clear understanding of concepts, meticulous organization, and logical problem-solving. Always start by thoroughly understanding the question, organize your data carefully, perform calculations methodically, and interpret your results in context. Practice a variety of problems to build confidence, and use statistical tools and software where permitted to enhance accuracy. Remember, clarity in presentation and proper explanation are just as important as correct calculations. By adopting these strategies, students can confidently tackle their IMT assignments and excel in quantitative analysis.

Additional Resources and Practice
